

# Polytechnic Institute of Viseu

## School of Technology and Management of Viseu

Course title	Quantitative Methods for Business		
Scientific area	Mathematics		
Teaching method	The teaching method will be diversified but emphasizing a practical and active methodology of the kind "hands on". Lectures, discussions, self-study and research will also be used as teaching methods.		
Lecturers:	Carla Henriques Isabel Duarte Nuno Bastos Nuno Conceição	Language of instruction	English
ECTS	6	Semester	Spring
Hours per week	4	Hours per semester	52 TP
Objectives of the course	<p>The main objectives of the course are:</p> <ul style="list-style-type: none"> <li>- interpret graphs of affine and quadratic functions, identifying intervals of growth and decrease, signs and zeros</li> <li>- Provide students with knowledge and practice of descriptive data analysis tools, so that they will be able to organize, represent and summarize the information contained in a data set, in order to highlight relevant aspects in the context of a case study.</li> <li>- Use Microsoft Excel to produce tables, graphs and also master the descriptive data analysis tools available in Excel.</li> <li>- Recognize the usefulness of linear regression models and know how to use Excel for construction and analysis and an explanatory model in the context of a given case study.</li> <li>- Understand the difference between simple and compound interest;</li> <li>- Understand the importance of the time factor and the meaning of the time value of money;</li> <li>- Know how to determine loan repayments.</li> </ul>		
Entry requirements	Does not apply.		
Course contents	<p><b>Elementary functions</b></p> <ul style="list-style-type: none"> <li>• Generalities about functions: Concept of function, domain, range and arrival set, zeros and graph of functions;</li> <li>• Affine function and quadratic function</li> </ul> <p><b>Descriptive Statistics</b></p> <ul style="list-style-type: none"> <li>• Generalities: population, sample, survey</li> <li>• Organization and processing data</li> <li>• Frequency tables</li> <li>• Measures of location: average, Mode, median, quantiles</li> <li>• Measures of dispersion: total range, interquartile range, mean deviation, variance, standard deviation and coefficient of variation</li> <li>• Graphics</li> <li>• Use of Microsoft Excel tools in descriptive data analysis</li> </ul> <p><b>Linear Regression</b></p> <ul style="list-style-type: none"> <li>• Scatter diagram</li> </ul>		

	<ul style="list-style-type: none"> <li>• Linear regression model</li> <li>• Least squares estimation</li> <li>• Correlation and determination coefficients</li> </ul> <p>Use of Microsoft Excel tools in regression analysis</p> <p><b>Introduction to Mathematical Finance</b></p> <ul style="list-style-type: none"> <li>• Simple and compound interest</li> <li>• Present and future value of money</li> </ul> <p>Loan amortization</p>
Assessment methods	Assessment based on practical works/assignments.
Recommended readings	<ul style="list-style-type: none"> <li>– Johnson, R. A. &amp; Bhattacharyya, G. K. (1992). Statistics: Principles and Methods. New York: John Wiley &amp; Sons (ESTGV: 519.2 JOH STA)</li> <li>– Waller, Derek L. (2008). Statistics for business. Amsterdam: Elsevier (ESTGV: 519.2 WAL)</li> <li>– Davidson, J. &amp; Mulbery, K. (2014). Microsoft excel 2013: Comprehensive. Boston: Pearson. (ESTGV: 004.4 MUL)</li> </ul>
